

Fluid Stroll

Event Description: Have you ever tried to walk on water? (And no, ice skating doesn't really count). No wonder you were unsuccessful but why exactly did you fail? Your density is much higher than that of water, so you sank. Yet, other organisms can walk on water. If you apply a bit of science, you can too.

What science? Don't worry; we did the hard part.....

We used a pool, filled with a mix of a solid and water. The mixture becomes a non-Newtonian fluid. When stress is applied to the liquid it exhibits properties of a solid.

But you need to step up in our experiment. We are looking for representatives who could efficiently walk/perform skill on it. Simple? Well it isn't gonna be that easy.

General Rules:-

1. Solo participation event.
2. Participants will be asked to do walk/jump on water and will be given only 30 sec.
3. Based on that, points will be given and the one with maximum points win.
4. Cash Prizes worth Rs. 3000 to be won.

Judging Criterion:-

Teams will be judged on the following criterion-

Participants need to cover the distance in the time frame mentioned i.e. 30sec.

For Girls: Back Walking- 1pt, Jumping-3pt, running is not allowed, it may result in -2 pt

For Boys: only Pushups - 3 pt

Incase, you fall or stumble= -2 pt.
